

ProBox

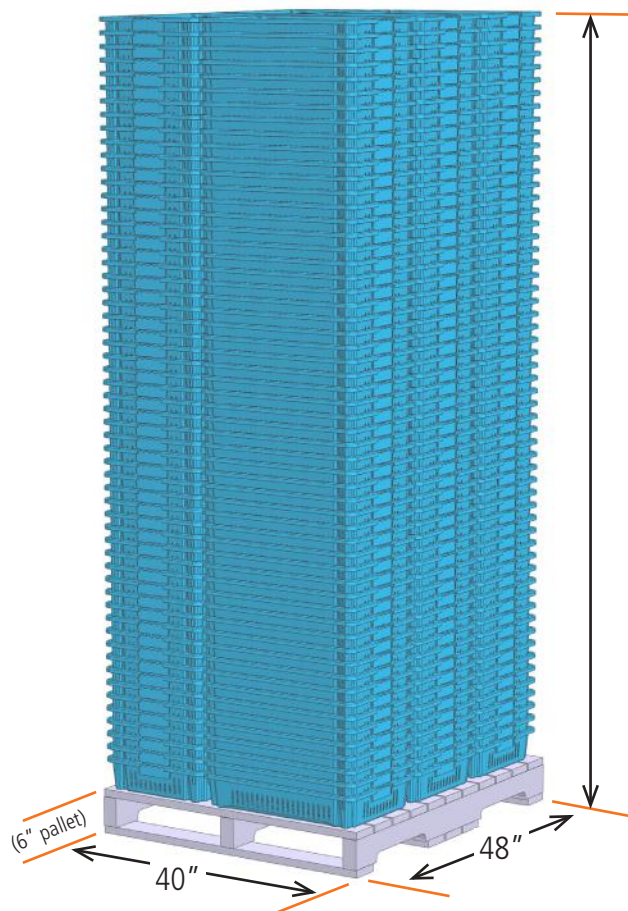

The ProBox is a breakthrough in cleanable geometry. Corners, perimeter edges, radii, and vent holes have all been optimized for maximum cleanability. Heat resistant, high impact polypropylene can be steam cleaned unlike cheaper HDPE old style boxes. The ProBox fits a clean room environment and the packer who demands the cleanest containers.

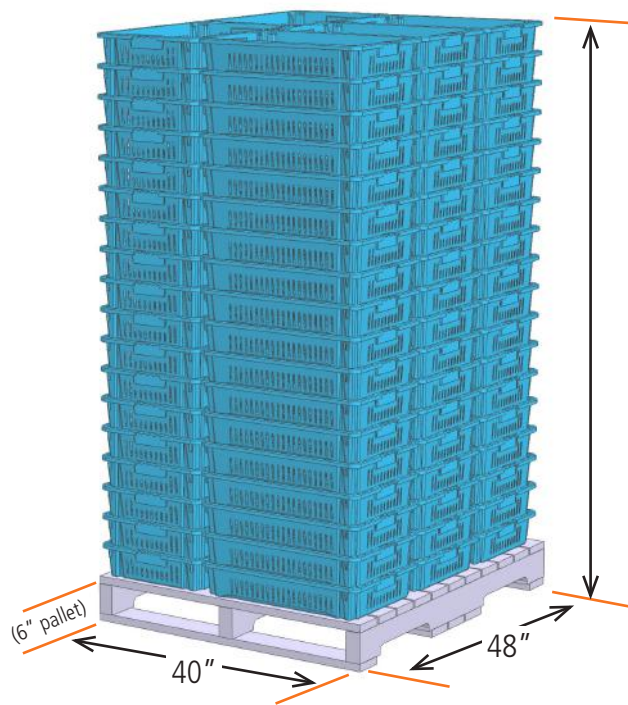

- First Ag container of its kind specifically designed for best cleaning
- All corners are extra rounded and open for easy wash
- No deep crevices, welds, sharp corners, dirt trapping ribs.
- Switch to Polypropylene, stable with steam and hot water clean, unlike the more common HDPE which deforms under heat.
- Ultra smooth to protect delicate produce
- 1378 ventilation holes to rapidly evacuate heat and humidity to improve shelf life and quality
- Extreme ventilation allows easy, fast, effective washing and draining of delicate fruits and berries.
- Great logistics - up to 8550 empties per 53 trailer when empty.
- Never jams, easy to stack and nest.

57 high empty - 108"

18 high full - 77"

57 layers empty
285 / pallet

18 layers stacked full
90 full / pallet
